In-Service Inspection & Testing of Electrical Equipment

All electrical appliances, power distribution units and cables are tested for electrical safety annually, in compliance with *The Electricity at Work Regulations (1989)* and in accordance with *The IET Code of Practice – In-Service Inspection and Testing of Electrical Equipment, 5th Edition*.

Results are recorded against asset records in the hire management system. Items which are overdue for, or fail inspection are unable to be booked out for use.

Items that pass inspection are labelled with a green 'pass' label, including the tester's name, test date and re-test date.

Items that fail inspection are labelled with a red 'fail' label and removed from use.
